# Motivation

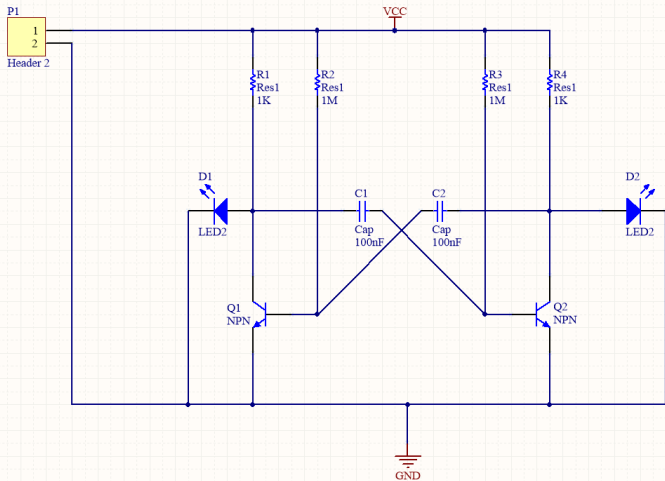

- current options
  - write GCode by hand
  - use specialized software
  - see Current Development
- need for software to make 3d-printed electronics viable

# Electrical Requirements

- specify requirements for the circuit
- find components that fulfill requirements
- inform about components using datasheets

# Schematic

- specify components/find components specification in library
- place components in schematic
- verify circuit using knowledge and/or simulation

# Component Placement

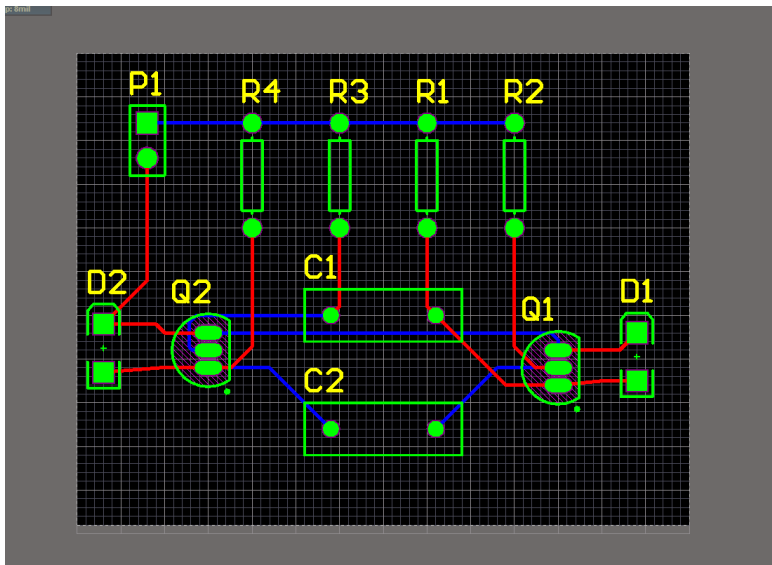

- specify physical component dimensions
- place components on PCB
- verify spatial requirements

# Routing

- specify trace width
- route traces specified by schematic
- move components if necessary

# Spatial Requirements

- specify physical dimensions

## 3D-Modelling

- draw sketch
- extrude 2D sketch to 3D component
- create 2D sketch on 3D models surface or on work plane
- cut or extrude from original model

# Print Preparation

- export model to slicing tool (Slic3r)
- set slicing parameter

# Distinct Processes

- determining electrical and physical requirements
- schematic drawing creation

# Combined Processes

- 3D-modelling
- component placement
- routing (2.5D  $\rightarrow$  3D)

# Print Preparation

- ink nozzle can be controlled like regular nozzle
  - different extrusion characteristics
- component placement requires different approach

# Existing and Required Software

- existing software
  - schematic drawing
  - 3D modelling
    - placing
- required software
  - routing tool
  - print preparation tool

## Challenges with separate Software

- importing file formats
- extension of file format needed for components/3D modelling tool needs to support existing component file format
- changing position of components after beginning to route

# Requirements for Routing and Placement Tool

- import model and schematic
- placement of components
  - component library
- assist user in 3D routing
  - displaying „rat's nest“ from schematic
  - snap traces to components pins
  - provide work planes
  - 3D routing algorithm (computationally hard)

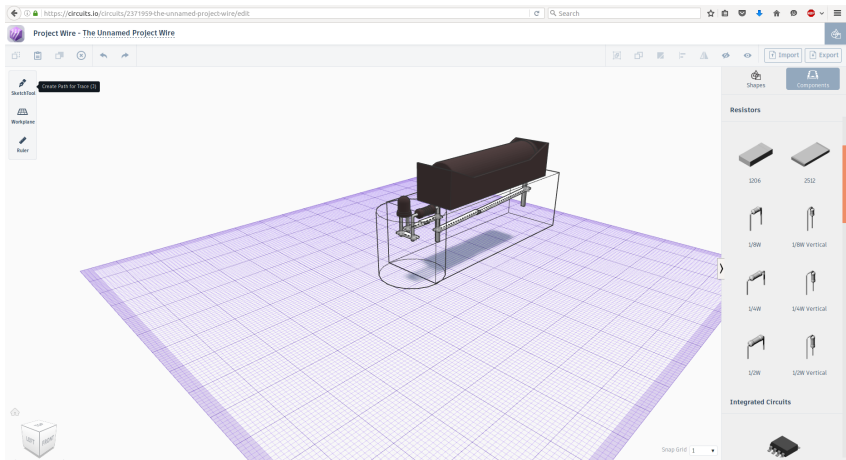

## Requirements for Print-Preparation-Tool

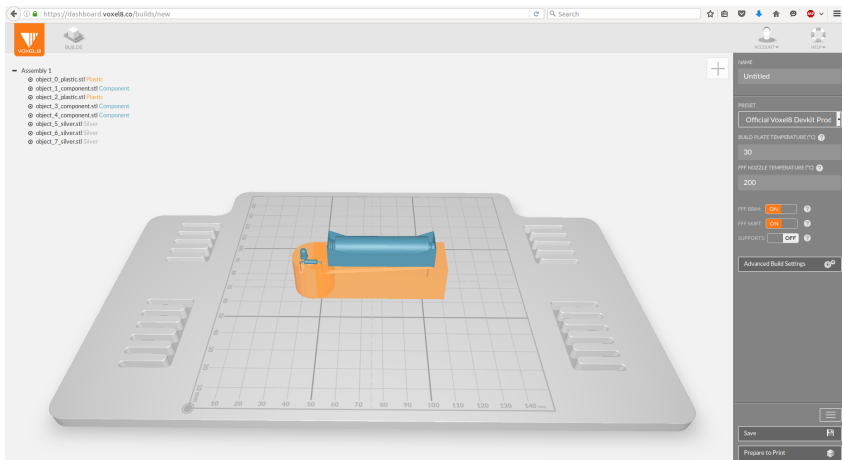

- import and analyze files from routing and placement tool
- provide new algorithms and settings for technology used for traces
- currently no standards for 3D electronics printers

# Current Development

- PCB-Folding
- Autodesk Project Wire Beta
- Voxel8 Dashboard
- Slic3r modification
