Dexterous Manipulation With Hand Synergies

Berk Güngör

University of Hamburg
Faculty of Mathematics, Informatics and Natural Sciences
Department of Informatics
Technical Aspects of Multimodal Systems

12-January-2023

- ▶ Introduction
- ▶ Pisa/IIT SoftHand
- ▶ Pisa/IIT SoftHand 2
- ▶ Augmented Adaptive Synergies
- ▶ Design
- ▶ Experiments
- ▶ Evaluation

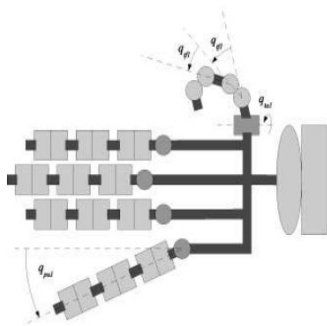

- ▶ Design and control of a new version SoftHand
- ▶ Perform a wide range of grasping and manipulation tasks
- ▶ Develop a robot hand that can perform complex manipulation tasks with a high degree of dexterity

- ▶ Dexterous manipulation needs a high degree of adaptability to different environments and objects.
- ▶ The Pisa/IIT SoftHand has previously been introduced.
- ▶ The SoftHand 2 has a new kinematic structure.
- ▶ SoftHand 2 uses a new control strategy based on the concept of adaptive synergies.

- ▶ Designed for dexterous manipulation [2]
- ▶ One DoA in a compact setup [2]
- ▶ Mostly focused on grasping tasks
- ▶ Winner of Robotics Grasp and Manipulation Challenge at IROS 2016

(a)

(b)

- ▶ SoftHand 2 combines good grasping performance and dexterous in-hand manipulation capabilities.[4]
- ▶ Two DoA in a compact setup [4]
- ▶ Wider range of grasping and manipulation [4]
- ▶ Uses augmented adaptive synergies for control [4]

- ▶ Pisa/IIT SoftHand 2 has a total of 19 DOF [4]
- ▶ 2 Motors actuate tendon. [4]
- ▶ Wider range of grasping and manipulation [4]
- ▶ Uses augmented adaptive synergies for control [4]

Santina et al. Toward Dexterous Manipulation With Augmented Adaptive Synergies: The Pisa/IIT SoftHand 2 [4]

- ▶ Hand Kinematics
- ▶ Revolute-Revloute arm
- ▶ red line : tendon
- ▶ q : joint angle

- ▶ Compact design
- ▶ Manual control option
- ▶ Robotic arm integration

Santina et al. Toward Dexterous Manipulation With Augmented Adaptive Synergies: The Pisa/IIT SoftHand 2 [4]

- ▶ How humans use their hands to manipulate tools ?
- ▶ Grasping synergies

[<https://orthofixar.com/anatomy/hand-anatomy-bones-muscles/>]

- ▶ mcp and pip joints of four fingers
- ▶ angle of abduction(abd)
- ▶ For the thumb, the mcp, abd and ip

Postural Hand Synergies

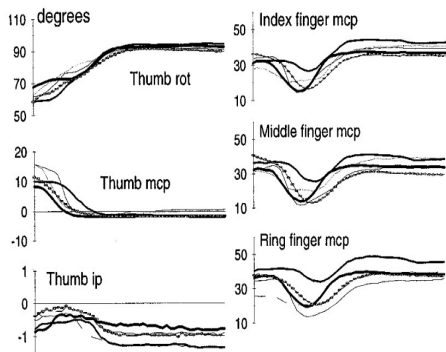

Motivation

Introduction

SoftHand

SoftHand 2

Experiment

Circular ashtray

Frying pan

Zipper

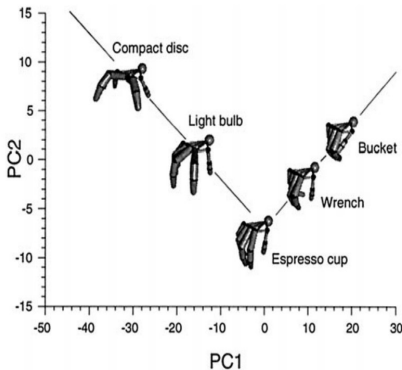

Computer mouse

Santello et al. Postural hand synergies for tool use [3]

Postural Hand Synergies

- ▶ Principal Component Analysis
- ▶ Tested with 57 different objects

Santello et al. Postural hand synergies for tool use [3]

- ▶ Synergies : aiming to reproduce a similar human hand motions.
- ▶ Soft Synergies : allow for more natural and efficient movement[1]
- ▶ Adaptive Synergies : allow the hand to adapt to new[4]
- ▶ Final posture of the hand depends on the external wrenches, internal torques and springs elasticity [4]

$$q = S\sigma$$

$$q = S\sigma - CJ^T f_{ext}$$

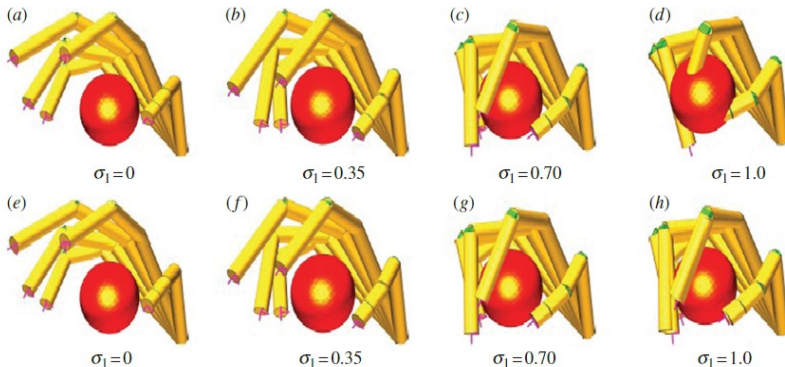

- ▶ q : Hand joint angles
- ▶ S : Synergy matrix
- ▶ σ : motion angles (posture in synergy)

$$J^T f_{ext}$$

:all contact forces

- ▶ a-d : rigid manifold
- ▶ e-h : soft synergies which is repelled by contact forces with the object

Santello et al. Modelling natural and artificial hands with synergies [1]

- ▶ Adaptive Synergies exploits differential mechanisms and space of self-motions to adapt to the environment.
- ▶ Augmented Adaptive Synergies
 - ▶ Reduces the number of parameters that the control system needs to estimate and update.
 - ▶ Fixed + Adaptive components to improve the overall performance of the hand control.

Santello et al. Modelling natural and

artificial hands with synergies [1]

Simulative Results

Motivation

Introduction

SoftHand

SoftHand 2

Experiment

- ▶ Effect of sliding in the steady-state posture
- ▶ When 2N force is applied, index finger did not react.
- ▶ The constant sliding generates a tension redistribution.

Santina et al. Toward Dexterous Manipulation With Augmented Adaptive Synergies: The Pisa/IIT SoftHand 2 [4]

- ▶ A. Control by error-based PD controller
 - ▶ motor pulley radius r
 - ▶ τ represents motor torques
 - ▶ motor angles θ_1 and θ_2 are mapped into σ and s
 - ▶ The control is mapped back to motor inputs/

Santina et al. Toward Dexterous Manipulation With Augmented Adaptive Synergies: The Pisa/IIT SoftHand 2 [4]

- ▶ B. Human–Machine Interface
 - ▶ Joystick control
 - ▶ Enables quick experiment

SoftHand 2

Experiment

Shadow Dexterous Hand

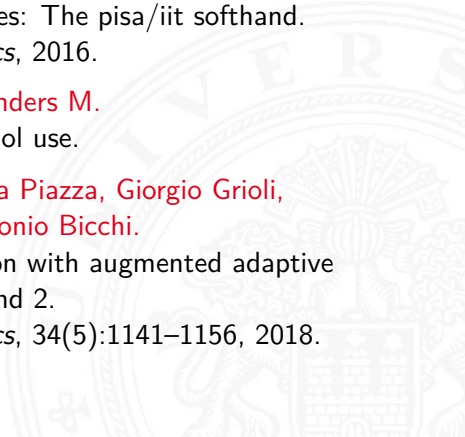

- ▶ 29 active joints and tendons
- ▶ High degree of dexterity
- ▶ Suitable for grasping with teleoperation

Pisa/IIT SoftHand 2

- ▶ Designed to be soft
- ▶ Allows to conform to the shape of objects
- ▶ better for fragile/soft objects with good grasping force

- ▶ Pisa/IIT SoftHand 2 has two DoA and 19 DoFs.
- ▶ Objects are grasped with first DoA and manipulated with second DoA.
- ▶ Grasping capability is increased compared to SoftHand1.
- ▶ Augmented Adaptive Synergies helps to optimize grasping.
